

Features

- Unique QuartzXM eXpress Module enables deployment in custom form factors
- Incorporates Xilinx® Zynq® UltraScale+™ Gen 3 RFSoc
- 16 GB of DDR4 SDRAM
- LVDS connections to the Zynq UltraScale+ FPGA for custom I/O
- GTY connections for gigabit serial communication
- Ruggedized and conduction-cooled versions available
- Includes a complete suite of IP functions and example applications
- Navigator® BSP for software development
- Navigator® FDK for custom IP development
- Carrier Design Package available to enable custom carrier design
- Free lifetime applications support

QUARTZ

Applications

- High-bandwidth data streaming
- Waveform signal generator
- Multimode data acquisition system
- Communication receiver and transmitter
- Electronic Warfare transponder
- Analog I/O for digital recording and playback
- Remote monitoring
- Sensor interfaces

General Information

Pentek's Quartz[®] Model 6003 is a high-performance Quartz eXpress Module (QuartzXM) based on the Xilinx Zynq UltraScale+ RFSoc FPGA. The RFSoc FPGA integrates eight RF-class A/D and D/A converters into the Zynq's multiprocessor architecture, creating a multichannel data conversion and processing solution on a single chip.

The Model 6003 has been designed to bring RFSoc performance to a wide range of different applications by offering the FPGA in a small system-on-module solution measuring only 2.5 by 4 inches. In addition to the RFSoc FPGA, the 6003 includes all of the support circuitry needed to maximize the performance of the RFSoc. The 6003 is available on standard form factor carriers including 3U VPX, SOSA aligned 3U VPX, PCIe, and small form factor enclosures in both commercial and rugged options. In many applications one of Pentek's carrier configurations can provide a final, deployable turn-key solution.

QUARTZ

In situations where only a custom form factor will satisfy the application requirements, Pentek supports the 6003 with a [design kit](#) that helps users engineer and build their own custom carrier. As a complete and tested module, the Model 6003 QuartzXM encapsulates best-in-class electrical and mechanical design, eliminating some of the most challenging aspects of embedded circuit design and allowing users to focus on an application-specific carrier design.

Board Architecture

The 6003 board design positions the RFSoc as the cornerstone of the architecture. All control and data paths are accessible by the RFSoc's programmable logic and processing system. A full suite of Pentek-developed IP and software functions utilize this architecture to provide data capture, generation, and processing solutions for many of the most common application requirements. For many applications, the Model 6003's built-in functions can be used as the foundation for custom applications.

Extendable IP Design

For applications that require specialized functions, users can install their own custom IP for data processing. The Pentek [Navigator FPGA Design Kit \(FDK\)](#) includes the board's entire FPGA design as a block diagram that can be edited in Xilinx's Vivado[®] IP Integrator. In addition to the IP Integrator block diagrams, all source code and complete IP core documentation is included. Developers can integrate their own IP along with the Pentek factory-installed functions or use the Navigator kit to completely replace the Pentek IP with their own.

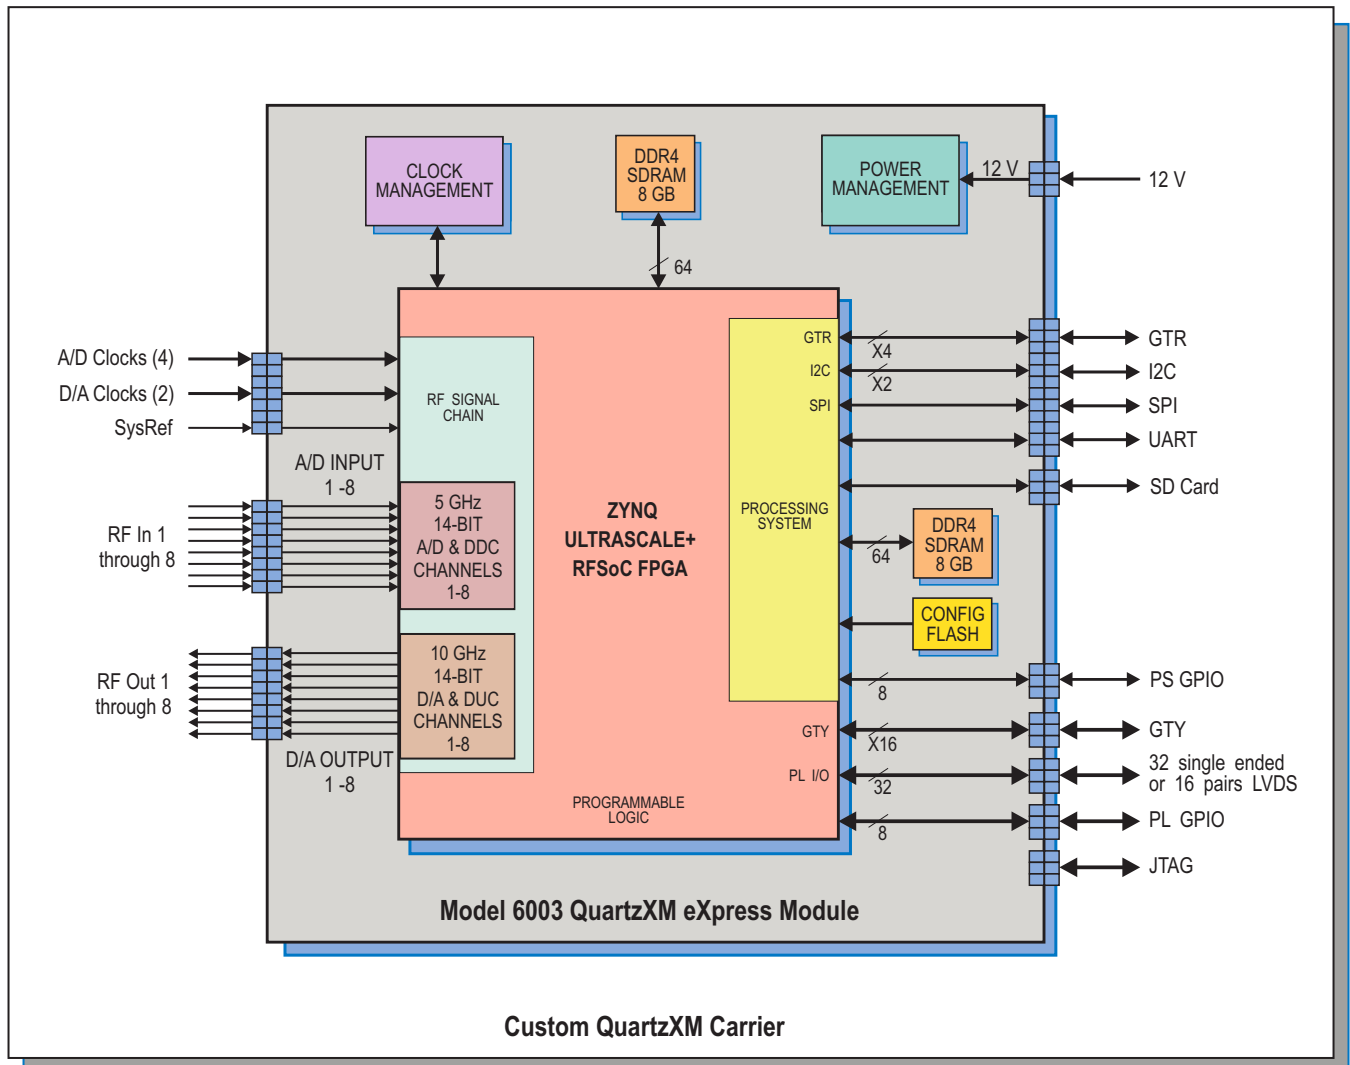

The [Navigator Board Support Package \(BSP\)](#), the companion product to the Navigator FDK, provides a complete C-callable library for control of the 6003's hardware and IP. The Navigator FDK and BSP libraries mirror each other where each IP function is controlled by a matching software function, simplifying the job of keeping IP and software development synchronized.

The Navigator BSP includes support for Xilinx's PetaLinux running on the ARM Cortex-A53 processors. When running under PetaLinux, the Navigator BSP libraries enable complete control of the 6003 either from applications running locally or on the ARMs, or using the Navigator API, control and command from remote system computers.

6003 Block Diagram

Click on a block for more information.

A/D Converter Stage

The 6003 accepts analog IF or RF inputs from the carrier board on a multichannel connector, delivering the inputs as differential pairs into the RF signal chain of the RFSoc. Inside the RFSoc, the analog signals are routed to eight 5 GSPS, 14-bit A/D converters. Each converter has built-in digital downconverters with programmable 1x, 2x, 3x, 4x, 5x, 6x, 8x, 10x, 12x, 16x, 20x, 24x, or 40x decimation and independent tuning. The A/D digital outputs are delivered into the Zynq's programmable logic and processor system for signal processing, data capture, or for routing to other resources.

In addition to the A/D's built-in decimation, an additional stage of IP-based decimation provides another 16x stage of data reduction, ideal for applications that need to stream data from all eight A/Ds.

D/A Converter Stage

The RFSoc's eight D/A converters accept base-band real or complex data streams from the FPGA's programmable logic. Each 10 GSPS, 14-bit D/A includes a digital upconverter with independent tuning and interpolations of 1x, 2x, 3x, 4x, 5x, 6x, 8x, 10x, 12x, 16x, 20x, 24x, or 40x. The individual D/A outputs are delivered to the carrier board through a multichannel connector as differential pairs.

When the 6003 QuartzXM is installed on Pentek's 3U Open VPX carrier as the [Model 5953](#), both the RF inputs and outputs are transformer coupled to front panel MMCX connectors. For applications that require special analog processing or connectorization, the 6003 can be mounted on a [custom-designed carrier](#) to satisfy the specific application requirements.

Clocking and Synchronization

The 6003 accepts all of the clock signals required by the RFSoc through a multisignal connector from the carrier. In addition, the 6003 design includes a clock management section for distributing the clock and synchronization signals throughout the module.

Memory Resources

The 6003 architecture supports an 8 GByte bank of DDR4 SDRAM memory accessible from the Programmable Logic. User-installed IP, along with the Pentek-supplied DDR4 controller core within the FPGA, can take advantage of the memory for custom applications.

An 8 GByte bank of DDR4 SDRAM is available to the Processing System as program memory and storage.

PCI Express Interface

In many applications, the 6003 will be used with a PCIe interface provided by the carrier. The Pentek [Navigator FDK](#) library includes multiple DMA controllers for efficient transfers to and from the module.

Power Management

The RFSoc FPGA requires nine different and separate power supplies. In addition, other peripheral circuits needed by the RFSoc require separate supplies. The 6003 includes thirteen different onboard power supplies to support the RFSoc and associated circuitry. Because the supply complexity and sequencing is managed by the 6003 module, a custom carrier needs only to provide a single 12V supply to the module, greatly simplifying the [carrier design](#).

Expandable I/O

The 6003 provides an interface to all of the digital signals needed by the RFSoc's processing system and programmable logic sections through a high-speed connector to the carrier. The RFSoc's GTY high-speed gigabit serial interfaces are supported by connectors capable of delivering 28 Gb/sec, needed for protocols like 100GigE.

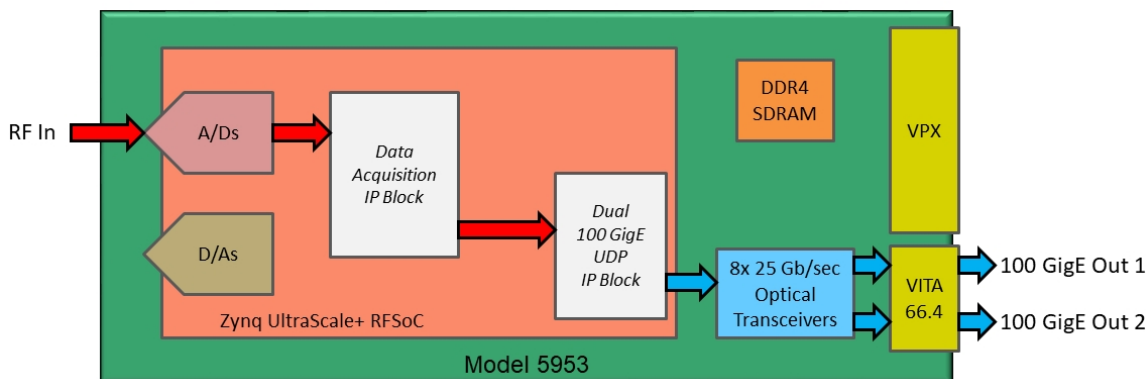

Optimized IP

Xilinx has created an integrated processing solution in the RFSoc that is unprecedented. The key to unlocking the potential of the RFSoc is efficient operation using optimized IP and application software. Pentek helps streamline the process from development to deployed application by providing a full suite of built-in functions. These address the data flow and basic processing needed for some of the most common applications.

Several example applications using the Pentek Model 5953 are described below. (The Pentek Model 5953 delivers the 6003 QuartzXM as a 3U OpenVPX board.) For each example, the board's included IP is all that is needed to demonstrate the application and may satisfy the full set of requirements for any particular application. These applications can also be the starting point for adding additional IP from the Pentek Navigator IP library or for adding custom IP.

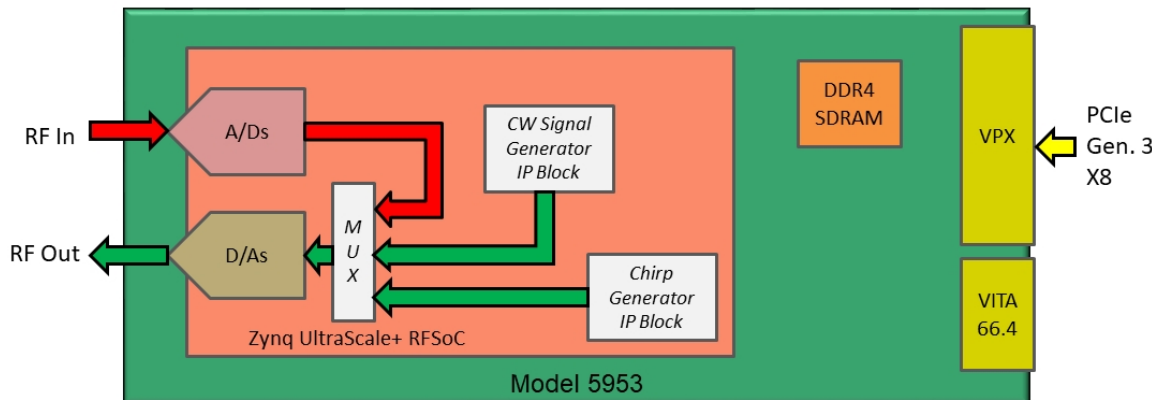

Example Application 1 - High Bandwidth Data Streaming

The RFSoc's eight A/Ds are capable of producing an aggregate data rate of 80 GB/sec when all channels are enabled. While capturing and storing this much raw data is not feasible, the A/Ds built-in digital down-converters can reduce this data throughput in many applications to a rate reasonable for the data streaming and storage components downstream in the system. In some applications capturing the raw, full bandwidth data is crucial. The 5953's dual 100 GigE UDP engine provides a high bandwidth path for moving data off of the board. Along with the built-in data acquisition IP, the 5953 can stream raw data from two A/D channels running at 4 GSPS over optical cable to a downstream storage or processing subsystem.

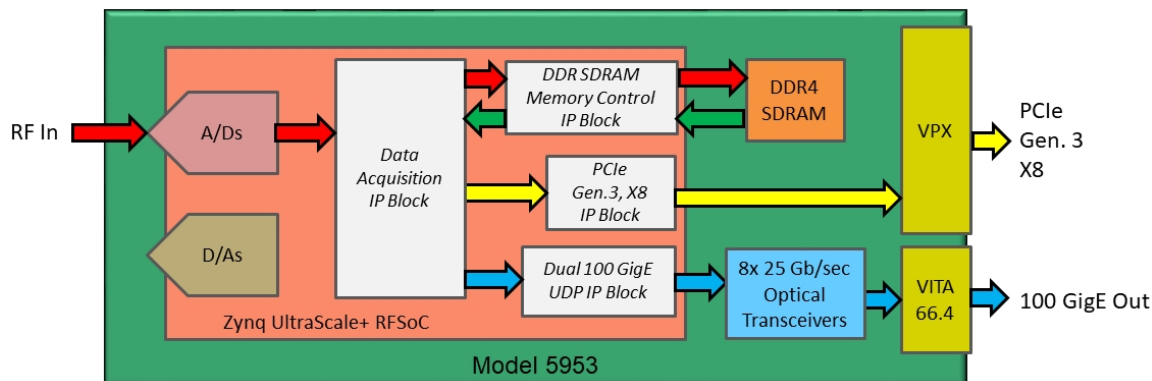

Example Application 2 - Waveform Generator

The 5953's IP supports multiple D/A signal source options. A simple loopback path allows samples received by the A/Ds to be output through the D/As. A CW signal generator produces a sine output with programmable frequency. A chirp generator, ideal for radar applications, outputs sweep signals with programmable frequency, ramp, phase offset, gain offset, and length. The generators also include flexible trigger options with both internal and external triggering.

Example Application 3 - Multimode Data Acquisition System

In some applications multiple data acquisition modes may need to be operated at the same time. A required dataflow could be full bandwidth streaming of a single A/D channel over 100 GigE to a data recorder while another channel of A/D data is stored as snapshots in the board's DDR4 SDRAM and read by the ARM processor while yet other A/D channels are down converted using the A/Ds' built-in DDCs and streamed over PCIe. The 5953 provides these modes with built-in IP supporting complex data streaming scenarios without the need for creating custom IP.

Flexible Modular Design

While Pentek's Model 5953 follows the form factor of a standard 3U OpenVPX board, the unique modular design of Pentek's Model 6003 QuartzXM eXpress Module provides the flexibility to deploy this solution in many different situations. The heart of the QuartzXM is a system on module containing all of the key components including the RFSoc FPGA, DDR4 SDRAM, and power and clock management.

The Model 6003 QuartzXM can also be mounted on other carriers available from Pentek to support standard form factors, or for applications that require a non-standard footprint, Pentek supports the module with a design kit for users to engineer and build their own custom carrier. As a complete and tested module, the QuartzXM encapsulates best-in-class electrical and mechanical design, eliminating some of the most challenging aspects of embedded circuit design and allowing the user to focus on the application-specific carrier design.

Model 6003 QuartzXM eXpress Module

Carrier Design Package

Pentek offers the Model 4801 Carrier Design Kit for users interested in designing their own carrier for the 6003 QuartzXM. The kit uses the Pentek [Model 5953](#) 3U OpenVPX carrier as a reference design. The kit includes:

- Pin definitions and electrical specifications of all signals on the module
- 3D models of the module
- Thermal profiles of the module and components
- Carrier reference design schematics
- PCB stack-up recommendations
- PCB design guidelines and routing rules
- Operating system and bootstrap guidelines
- Additional electrical and mechanical engineering guidance

Model 6003 QuartzXM customers must purchase the [Model 5953](#) 3U VPX carrier board, which includes the QuartzXM within an open-standard form factor. This allows the user to start IP development and proof of concept designs immediately on a known, tested platform while they develop their own carrier for later deployment. To further speed development tasks, Pentek offers [a single-slot 3U VPX development chassis](#) with the Model 5953 installed, along with a rear transition module (RTM) and all needed cables.

Navigator Design Suite

For applications that require specialized functions, the Navigator Design Suite allows customers to fully utilize the processing power of the FPGA. It includes an FPGA design kit for integrating custom IP into Pentek's factory-shipped design, and a board support package for creating host applications for control of all hardware and FPGA IP-based functions.

The **Navigator FPGA Design Kit (FDK)** for the Xilinx® Vivado® Design Suite includes the complete Vivado project folder for each Pentek product with all design files for the factory-installed FPGA IP. Vivado's IP Integrator is a graphical design entry tool that visually presents the complete block diagram of all IP blocks so the developer can access every component of the Pentek design. Developers can quickly import, delete, and modify IP blocks and change interconnection paths using simple mouse operations. Navigator FDK includes Pentek's IP core library of more than 100 functions representing a wealth of resources for DSP, data formatting, timing, and streaming operations, all based on the powerful AXI4 standard. Multilevel documentation for each IP core is a mouse click away, and fully consistent with Xilinx IP cores.

The **Navigator Board Support Package (BSP)** provides software support for Pentek boards. It enables operational control of all hardware functions on the board and IP functions in the FPGA.

The BSP's structure is designed to complement the functions of the FDK by maintaining a one-to-one relationship between FDK and BSP components. For each IP block found in the FDK library, a matching software module can be found in the BSP. This organization simplifies the creation and editing of software to support new IP functions and modifications to existing IP cores.

Because all Pentek boards are shipped with a full suite of built-in IP functions and numerous software examples, new applications can be developed by building on the provided software examples or built entirely new with the BSP's extensive libraries. All BSP libraries are provided as C-language source for full access and code transparency.

The Navigator BSP includes the Signal Viewer, a full-featured analysis tool, that displays data in time and frequency domains. Built-in measurement functions display 2nd and 3rd harmonics, THD (total harmonic distortion), and SINAD (signal to noise and distortion). Interactive cursors allow users to mark data points and instantly calculate amplitude and frequency of displayed signals. With the Signal Viewer users can install the Pentek hardware and Navigator BSP and start viewing analog signals immediately.

Specifications

Field Programmable Gate Array

Type: (standard) Xilinx Zynq UltraScale+ RFSoc XCZU47DR

Option -048: RFSoc XCZU48DR

Speed: (standard) -1 speed grade

Option -002: -2 speed grade

RFSoc RF Signal Chain

Analog Inputs

Quantity: 8

Connector: Board-to-board, multichannel differential

Input Type: Differential

Full Scale Input: 1Vp-p into 100 ohm on-die termination

3 dB Passband: 6 GHz

A/D Converters

Quantity: 8

Sampling Rate: 5.0 GHz

Resolution: 14 bits

Digital Downconverters

Quantity: 1 per A/D

Decimation Range: 1x, 2x, 3x, 4x, 5x, 6x, 8x, 10x, 12x, 16x, 20x, 24x, and 40x (not all decimations are supported by default IP)

LO Tuning Freq. Resolution: 48 bits, 0 to f_s

Filter: 80% pass band, 89 dB stop-band attenuation

Analog Outputs

Quantity: 8

Connector: Board-to-board, multichannel differential

Input Type: Differential

Full Scale Output: 32 mA

3 dB Passband: 6 GHz

D/A Converters

Quantity: 8

Sampling Rate: 10 GHz

Resolution: 14 bits

Digital Upconverters

Quantity: 1 per D/A

Interpolation Range: 1x, 2x, 3x, 4x, 5x, 6x, 8x, 10x, 12x, 16x, 20x, 24x, and 40x (not all interpolations are supported by default IP)

LO Tuning Freq. Resolution: 48 bits

Filter: 80% pass band, 89 dB stop-band attenuation

Sample Clock

Source: Received through board-to-board, multichannel connector

Quantity: 4 A/D clocks, 2 D/A clocks

SysRef

Received through board-to-board, multichannel connector

RFSoc RF Processing System

ARM Cortex-A53:

Quantity: 4

Speed: 1.5 GHz

ARM Cortex-R5:

Quantity: 2

Speed: 600 MHz

QuartzXM Digital Connector

(Programmable Logic)

Parallel: 32 single-ended or 16 pairs of LVDS connections

GTY: 16 full duplex lanes @ 28 Gb/sec Processing

GPIO: 8 single-ended

QuartzXM Digital Connector

(Processing System)

GTR: 4 full duplex lanes

I2C: Quantity 2

SPI: Quantity 1

UART: Quantity 1

SD Card Interface: Quantity 1

GPIO: 8 single ended

Memory

Processing System:

Type: DDR4 SDRAM

Size: 8 GB

Speed: 1200 MHz (2400 MHz DDR)

Programmable Logic:

Type: DDR4 SDRAM

Size: 8 GB

Speed: 1200 MHz (2400 MHz DDR)

PCI-Express Interface

PCI Express Bus: Gen. 1, 2 or 3: x4 or x8

Environmental

Standard: L1 (air cooled)

Operating Temp: 0° to 50° C

Storage Temp: -40° to 100° C

Relative Humidity: 0 to 95%, noncondensing

Option -763: L3 (conduction cooled)

Operating Temp: -40° to 70° C

Storage Temp: -50° to 100° C

Relative Humidity: 0 to 95%, noncondensing

Physical

Dimensions:

Depth: 101.6 mm (4 in)

Height: 63.5 mm (2.5 in)

Weight: 3.5 oz (99 grams)

Lifetime Applications Support

Pentek offers the worldwide military embedded computing community shorter development time, reliable, rugged solutions for a variety of environments, reduced costs, and mature software development tools. We offer free lifetime support from our engineering staff, which customers can depend on through phone and email, as well as software updates. Take advantage of Pentek's 30 years of experience in delivering high-performance radar, communications, SIGINT, EW, and data acquisition MIL-Aero solutions worldwide.
